CELF-5^{A&NZ} Screening Test

Clinical Evaluation of Language Fundamentals –
Australian and New Zealand Fifth Edition Screening Test

Elisabeth H. Wiig, PhD, Wayne A. Secord, PhD, Eleanor Semel, PhD

 **CELF 5^{A&NZ}**
SCREENING TEST

A quick screening test to help you determine language difficulties for students

The **CELF-5^{A&NZ} Screening Test** helps you quickly determine if a student needs further testing to identify a language disorder. The assessment is designed to help you screen morphology (grammar), syntax (sentence construction), semantics (vocabulary) and pragmatics (social) skills.

Appropriate **for students aged 5 through to 21 years old**, this tool is the only standardised screening measure available for older school-aged students!

Features & Benefits

- **Easy to administer** – test and scoring takes only 15 minutes
- **Engaging** – uses illustrations and colours to keep students engaged
- **Easy follow up** – Speech Pathologists are provided with additional objective evidence for further follow-up
- **Cost-effective** – universal screening for children from age 5 to young adults aged 21

Overview

The CELF-5^{A&NZ} Screening Test is a quick and accurate assessment that:

- Identifies those students who may be at risk of a oral and/or social language disorder
- Provides updated test content and visuals which reflects the current learning environment of today
- Has updated national norms to reflect changes in the Australian & New Zealand census population

What's the difference between the CELF-4 Screening Test, Australian & New Zealand Language Adapted Edition and the CELF-5^{A&NZ} Screening Test?

Everything you need to know

The latest edition was developed in collaboration with clinical and research experts at the forefront of clinical education in Schools.

The CELF-5^{A&NZ} Screening Test is a globally recognised Gold Standard screening tool which enables you to accurately identify children and adolescents – aged 5 to 21 – who may be experiencing language difficulties, within 10–15 minutes.

Teachers are ideally positioned to identify those children who are simply not progressing in the classroom. Early identification and intervention for children with oral and/or social language difficulties is essential as these have an impact on academic achievement.

CELF-5^{A&NZ} screener allows you to:

- Use an early identification tool preferred by speech pathologists globally
- Pinpoint language difficulties
- Connect with the local speech pathologist for referrals and support for your School

What's new in the CELF-5^{A&NZ} Screening Test?

It's been over a decade since Pearson Clinical released the CELF-4 Screening Test and you can expect many exciting and beneficial updates – from changes to testing, new ways to score students, to refreshed images, and updated normative data based on the latest Australian and New Zealand census.

Aligned to trends of current practice

Increased diagnosis of autism spectrum disorders and the increased focus on social language skills in the classroom and the transition that is being made more and more to Response to Intervention (RTI) - working with teachers, psychologists, and other specialists to support students who are having difficulty meeting curriculum objectives.

The new tests on CELF-5^{A&NZ} mirror these trends and now includes a pragmatics screening section.

Improved user friendliness

You'll find streamlined instructions, an updated record form, restructured testing and scoring to reduce administration time; helping you quickly and accurately identify those children who are at risk of a language disorder.

Refreshed images and language

Students' language and social skills today vastly differ to the norms since the last CELF-4 edition was published over a decade ago; images and language used across CELF-5^{A&NZ} Screener more accurately reflect the student's' learning environment today.

Updated normative data

Demographic information and population changes from the latest Australian and New Zealand census are now reflected in our normative data for more accurate scoring.

If you are still using CELF-4 Screener, why is it important to upgrade this year?

There is a grace period of 18 months from the release date, October 2017, before CELF-4 Screener is officially superseded (March 2019).

Speech-Language Pathologists recommend that Teachers upgrade to CELF-5^{A&NZ} Screener to take advantage of the updated research, streamlined assessment, reduced administration and scoring time.
